

NT CONCENTRATE 25# PAIL

Product No. 1928

Form: Pail

A source of neomycin sulfate and oxytetracycline hydrochloride to add to milk replacer or whole milk fed to calves.

MEDICATED

Neomycin Sulfate 10 g/lb and Oxytetracycline Hydrochloride 10 g/lb.

FEATURES AND BENEFITS

- Contains the maximum allowable dosage of neomycin sulfate and oxytetracycline hydrochloride for the treatment of bacterial enteritis (scours) and bacterial pneumonia (shipping fever complex) susceptible to oxytetracycline; treatment and control of colibacillosis (bacterial enteritis, scours) susceptible to neomycin
- Designed to be fed with other feedstuffs which allows flexibility in nutrition programs
- Packaged in 25 lb pails which saves packaging costs over packets/individual servings

DIRECTIONS FOR USE

MIXING DIRECTION: Blend 4.34 lbs. of powder into 50 pounds of dry, non-medicated calf milk replacer powder to make a Type C medicated milk replacer (complete ration) containing 1,000 mg Oxytetracycline Hydrochloride and 1,000 mg Neomycin per 1.25 pounds (20 ounces) of medicated milk replacer powder.

FEEDING INSTRUCTIONS: Feed the resulting Type C medicated milk replacer powder as a complete ration by mixing 10 ounces of powder into 2 quarts (1/2 gallon) of warm water (115-120°F). Feed 2 quarts of medicated milk replacer solution twice daily to provide 1,000 mg of oxytetracycline and 1,000 mg of neomycin base for each 100 lbs of calf body weight daily. Feed the medicated milk replacer in place of normal calf milk replacer continuously for 7 to 14 days. If symptoms persist after feeding the medicated milk replacer for 2 or 3 days, consult a veterinarian. Continue feeding the medicated calf milk replacer for 24 to 48 hours after the remission of disease symptoms.
