

# OPTAFLEXX® 2000 SHORT PELLETS

**Product No. 2516**

**Form: Short Pellet**

A supplement designed to incorporate ractopamine hydrochloride (Optaflexx®) into finishing rations for cattle fed in confinement for slaughter.

## MEDICATED

Ractopamine Hydrochloride 2000 g/ton. Equivalent to 1000 mg ractopamine HCl/lb.

## FEATURES AND BENEFITS

- Contains Optaflexx® for increased rate of weight gain, improved feed efficiency; increased carcass leanness
- Contains 1000 mg Optaflexx®/lb. Formulated to fed at 0.2 or 0.3 lb/head/day.
- Short pellet form mixes well in rations; less separation

## DIRECTIONS FOR USE

Feeding Optaflexx 2000 at the rate of 0.2 lb/head/day will provide 200 mg Ractopamine/head/day. Feeding at 0.3 lb/head/day will provide 300 mg/head/day.

Thoroughly mix 10 to 24 lb of this Type B medicated feed into 1,990 to 1,976 lb of non-medicated feed to obtain a Type C Medicated feed containing 10 to 24 g/ton ractopamine. Prepare an intermediate pre-blend of the medicated feed prior to mixing into a complete feed. Thoroughly mix the required amount in a convenient quantity of feed ingredients, then add to the remaining feed ingredients to make a ton of complete feed.

Feed the resulting Type C medicated feed continuously to cattle in confinement for slaughter as the sole ration for the last 28 to 42 days on feed. Please consult with your Famo Feeds dealer or representative for information concerning specific rations or mixes. Provide plenty of fresh, clean water at all times.
